

Clean Bond

For Cleaning:

- 1) Prepare surfaces as normal by removing loose or flaked rust and other debris.
- 2) Mix Clean Bond at a 1:9 ratio with water (1 quart of Clean Bond to 9 quarts water)
- 3) Spray the mixture onto the surfaces for cleaning
- 4) Scrub the surfaces using a scrub brush to disperse and remove oils and small particles left over from the initial cleaning
- 5) Rinse thoroughly to flush the lifted oils and particles down the drain
- 6) Wet-vac to remove pools of water

*Clean Bond is formulated and shipped free of objectionable NPEs and APEs to comply with requirements of today's green products. It is a neutral pH

*Shelf-life of Clean Bond concentrate as shipped is greater than one year.
